This report makes reference to the following documents:

D1: US 4 658 665 A (SEIDL ALFRED ET AL)

21 April 1987 (1987-04-21)

D2: EP 0 024 697 A (SIGMA BAUELEMENTE GMBH)

11 March 1981 (1981-03-11)

- 1 D1, which is considered to represent the closest prior art, discloses (the references in parentheses are to this document):

a circulating lubricant system for a train of gears with at least two gear stages (2) which are arranged adjacent to each other and operatively connected and a circulating lubricant system (9) comprising at least one filter unit (8)

from which the subject matter of independent claim 1 differs in that

lubricant circulating in the circulating

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

lubricant system is drawn off and
decontaminated by the filter unit before being
fed to the other gear stage.

In virtue of these differences, the subject matter
of the first and sole independent claim is novel.

Compared with the train of gears described in D1,
the location of the filter unit and the second
gear stage in the circulating lubricant system
requires substantial modification of the overall
train of gears. This could be achieved, even by a
person skilled in the art, only after substantial
effort and the subject matter of claim 1 is
therefore not only novel, but also involves an
inventive step.
